

HOW TO MEASURE AND ORDER YOUR NEW LAWN

To accurately measure the planned lawn area, you should adopt the following method...Length x Width = M² (Square Metres). i.e. 7M x 5M = 35M². Always add 5% extra for any cut-offs that cannot be reused.

But we know that not all gardens are simple in shape. If the lawn isn't straightforward in shape please give us a ring or e-mail us for some free advice.

Conversion Table

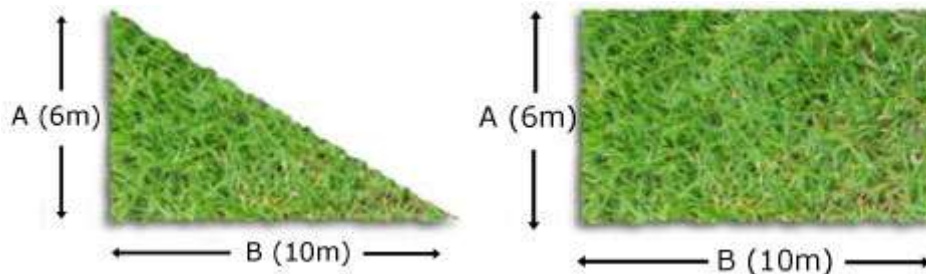

1 Foot = 0.3048 Metre (length)

1 Square Foot = 0.0929 Meters Squared (area)

1 Square Yard = 0.8361 Meters Squared (area)

1 Square Meter = 1.196 Square Yard (area)

We recommend that you only order your turf when all of the ground has been prepared and also more importantly especially in the summer months that you have adequate irrigation. Turf is a living product and is perishable and should be laid on the day of delivery where possible during hot periods.
